BUILD 4

CAREER STARTER PACK

A practical job-application portfolio for an entry-level software development role

Target role	Trainee Software Developer (Fresher)
Target employer	Cyber Infrastructure (CIS), Indore
Prepared by	[Your full name]
Course / class	[Your course and class]
Date	16 October 2026

Purpose: This portfolio matches application materials to one real entry-level job posting. Personal details and skills are left editable where they must be supplied or verified by the applicant. Do not submit claims that are not true.

RESUME • LINKEDIN • EMAIL • SKILL-GAP PLAN • AI PROMPTS

1. The job posting I selected

A real posting was selected so the application materials can be tailored to a specific role.

Role: Trainee Software Developer (Fresher)
Employer: Cyber Infrastructure (CIS)
Location: Indore, Madhya Pradesh
Experience: 0–1 year
Posting page: career.cisin.com/job/trainee-software-developers

What the employer highlights

- Strong programming fundamentals, object-oriented programming (OOP), logic, data structures and algorithms.
- Database knowledge, especially SQL Server or MySQL.
- Clear communication, teamwork, problem-solving and decision-making.
- React, Angular or Node.js knowledge is an added advantage.
- Learning software design, coding, testing and working with senior developers.

Tailoring strategy: Put verified programming and database skills near the top, show projects with concrete evidence, and use the role's language naturally. Because no personal résumé or skills list was supplied, the résumé below is an honest fill-in template—not a claim that the applicant already has every listed skill.

2. Targeted résumé

[YOUR FULL NAME]
[City, State] • [Phone] • [Professional email]
[LinkedIn URL] • [GitHub / portfolio URL, if available]

CAREER OBJECTIVE

Aspiring software developer seeking a trainee-level opportunity to apply my foundation in programming, problem-solving and database concepts. I am eager to learn from experienced developers, write readable code, test solutions carefully and contribute reliably to a collaborative team.

TECHNICAL SKILLS

Programming: [List only languages you can explain and use, e.g., Java / Python / C / JavaScript]
Core concepts: [OOP, data structures, algorithms—include only if understood]
Databases: [MySQL / SQL Server / other—include only if used]
Tools: [Git, GitHub, VS Code, etc.—include only if used]
Web: [HTML, CSS, React, Angular, Node.js—include only skills you can demonstrate]

PROJECTS

[Project title] | [Month Year]
• Built [what the project does] using [actual technologies].
• Implemented [one or two features you personally completed].
• Tested [what you tested] and improved [specific result, if measurable].
• Code / demo: [link, if available]

[Second project, if available] | [Month Year]
• Describe the problem, your contribution, technologies used and a verifiable outcome. If you have no second project, remove this section rather than inventing one.

EDUCATION

[Degree / course] — [College / university], [City]
[Expected graduation year or completion year] • [Marks / CGPA only if you want to include them]

EXPERIENCE / ACTIVITIES

[Add genuine internship, part-time work, volunteering, coursework, coding-club activity or relevant responsibility. If none, omit this section.]

Before submitting: replace every bracketed field, remove skills you cannot support, check all links, and keep the résumé to one page if possible.

3. LinkedIn headline and About section

Headline

Aspiring Software Developer | Programming Fundamentals | OOP & Problem-Solving | Learning SQL and Web Development

Use this headline only after confirming the listed concepts reflect your current learning. Remove SQL or web development if not applicable.

About

I am an aspiring software developer building a strong foundation in programming, logical thinking and software development. I enjoy breaking problems into manageable steps, learning how applications work and improving through practice. I am currently developing my technical skills through coursework and hands-on projects, with a focus on writing clear code, understanding object-oriented programming and working with databases. I value feedback, teamwork and continuous learning. I am interested in trainee or entry-level opportunities where I can contribute honestly, learn from experienced developers and grow into a dependable software professional.

I welcome opportunities to connect with developers, mentors and teams working on practical software projects.

Profile checklist

- Use a clear, professional profile photo and a simple banner.
- Add your real education, skills and project links.
- Add only skills you can discuss confidently in an interview.
- Keep your headline aligned with the roles you are applying for.

4. Professional email template

Subject: Application for Trainee Software Developer (Fresher)

Dear Hiring Team,

I am writing to express my interest in the Trainee Software Developer (Fresher) opportunity at Cyber Infrastructure (CIS) in Indore. I am building my foundation in programming, problem-solving and software development, and I am keen to learn through practical tasks and guidance from experienced developers.

My résumé is attached for your consideration. I would welcome the opportunity to discuss how my current skills, learning mindset and willingness to contribute could fit the role. I have included only information that reflects my actual background and experience.

Thank you for your time and consideration.

Kind regards,
[Your full name]
[Phone number]
[LinkedIn / GitHub link, if available]

Before sending: attach the final résumé, replace all placeholders, use a professional email address, and verify that the employer is still accepting applications.

5. Skill gaps identified and how I will close them

These are potential gaps based on the posting and the information available for this draft. They are not a claim that the applicant lacks every skill. Mark each item after honestly assessing current ability.

Skill area	Self-check / gap	Action plan
Programming + OOP	Can I write and explain small programs and classes without copying?	Practise 3 small programs per week; explain each solution aloud.
Data structures + algorithms	Can I use arrays/lists, strings, searching and sorting?	Solve beginner problems; review time and space complexity.
SQL / databases	Can I write SELECT, WHERE, JOIN and GROUP BY queries?	Create a small database and practise queries on sample data.
Project evidence	Do I have a project I built and can demonstrate?	Build one small app, document features, test it and publish code if appropriate.
Git + collaboration	Can I commit code, use branches and describe changes?	Practise a simple Git workflow and write a clear README.
Communication	Can I explain a project and ask clear questions?	Prepare a 60-second project explanation; practise mock interviews.
Web framework (bonus)	Have I actually used React, Angular or Node.js?	Choose one framework only after core basics; build a small guided project.

Priority order: strengthen programming and OOP first, then practise SQL and data structures, then build and document a project. Treat React/Angular/Node.js as an advantage—not a substitute for fundamentals.

6. Posting tailored to and AI prompts used

Posting tailored to

Cyber Infrastructure (CIS) — Trainee Software Developer (Fresher), Indore. Official posting: https://career.cisin.com/job/trainee-software-developers

AI prompts used

Prompt 1: “Review this job posting for a Trainee Software Developer (Fresher). Extract the required skills, responsibilities and bonus skills. Do not add requirements that are not in the posting.”

Prompt 2: “Create a one-page résumé template tailored to this posting. Use placeholders for personal information and experience I have not provided. Do not invent qualifications, projects, grades or achievements.”

Prompt 3: “Rewrite my LinkedIn headline and About section for an entry-level software development candidate. Keep it honest and avoid claiming professional experience I have not supplied.”

Prompt 4: “Draft a concise, professional application email for this role. Do not claim that I have attached a résumé or have skills unless I verify them.”

Prompt 5: “Compare the job requirements with this skills list: [insert my real skills]. Identify gaps, rank them by importance, and give me a practical study plan. Clearly label any assumptions.”

Prompt 6: “Proofread my final application materials for clarity, spelling, consistency and unsupported claims. List any placeholders I still need to replace.”

How AI was used responsibly

- AI helped organise the job requirements and draft application materials.
- No personal skills, work history, marks or projects were invented.
- The applicant must verify every claim and edit all placeholders before submission.
- Personal contact details should be removed from public examples and shared only through trusted application channels.

7. Sources and final submission checklist

Primary job source

Cyber Infrastructure (CIS), “Trainee Software Developers” — role details, experience level, responsibilities and required skills.
https://career.cisin.com/job/trainee-software-developers

Accessed: 16 October 2026. Job details can change; re-check the employer’s page before applying.

Final checklist

- Replace [Your full name], contact details, education and every other bracketed field.
- Remove any skill, project or claim that is not accurate.
- Add links to real projects or GitHub only if they work and are yours.
- Confirm the current status and application instructions on the official job page.
- Save the final résumé separately as a PDF and attach it to the email if required.
- Keep a copy of the exact job posting and the final prompts/materials submitted.

Important note
This document is a ready-to-edit assignment draft. Since your personal résumé, course details and verified skills were not provided, the personal fields are intentionally left as placeholders. Complete those fields before submitting.
